Permissions (7)

One of the following permissions is required to run the query. Select a permission and click Consent.

Directory.ReadWrite.All	Allows the app to read and write data in your organization's directory, such as other users, groups. It does not allow the app to delete users or groups, or reset user passwords.	✓	Consented
User.Read	Allows you to sign in to the app with your organizational account and let the app read your profile. It also allows the app to read basic company information.	×	Consented
User.Read.All	Allows the app to read the full set of profile properties, reports, and managers of other users in your organization, on your behalf.	✓	Consented
User.ReadBasic.All	Allows the app to read a basic set of profile properties of other users in your organization on your behalf. Includes display name, first and last name, email address and photo.	×	Consented
User.ReadWrite	Allows the app to read your profile, and discover your group membership, reports and manager. It also allows the app to update your profile information on your behalf.	×	Consented
User.ReadWrite.All	Allows the app to read and write the full set of profile properties, reports, and managers of other users in your organization, on your behalf.	✓	Consented

USER

EASY USER AUTHORIZATION AGAINST AAD IN POWER QUERY???

```
937 // Output generators
938 // ** Generic Fuctions
939 pbiAdminAPI = [
940     TestConnection = (dataSourcePath) => {"pbiAdminAPI.Navigation"},
941     Authentication = [
942         Aad = [
943             AuthorizationUri = authorize_uri,
944             Resource = resource_uri
945         ]
946     ],
947     Label = Extension.LoadString("DataSourceLabel")
948 ];
949 // ** Groups
950 [
951     DataSource.Kind = "pbiAdminAPI"
952 ]
```

SERVICE PRINCIPAL

Queries of this type are directly aimed at searching for information about the environment, its management and its modification, such as:

Get Groups

Get Datasources Of Dataset

Get Users of Dataset

Get ActivityEvents

Get WidelySharedArtifactsLinksSharedToWholeOrganization

Rotate EncryptionKey

Set Information Protection Label

...

SERVICE PRINCIPAL NEEDS

Admin API settings

- ▶ Allow service principals to use read-only Power BI admin APIs
Enabled for a subset of the organization
- ▶ Enhance admin APIs responses with detailed metadata
Enabled for a subset of the organization
- ▶ Enhance admin APIs responses with DAX and mashup expressions
Enabled for a subset of the organization

Oauth with Power Query

M IS FOR MAGIC!!!

Oauth with Power Query

URL

RELATIVE PATH

BODY OF CALL

```
let
    resource = "https://analysis.windows.net/powerbi/api",
    tokenResponse =
        Json.Document(
            Web.Contents(
                "https://login.windows.net",
                [
                    RelativePath = AzureADTenantID & "/oauth2/token",
                    Content =
                        Text.ToBinary(
                            Uri.BuildQueryString(
                                [
                                    client_id = AzureApplicationClientID,
                                    resource = resource,
                                    grant_type = "client_credentials",
                                    client_secret = AzureApplicationClientSecret
                                ]
                            )
                        )
                ]
            ),
            Headers = [
                Accept = "application/json"
            ],
            ManualStatusHandling = {
                400
            }
        )
    token_output =
        tokenResponse[token_type]
        & " "
        & tokenResponse[access_token]
in
    token_output,
```

Why do I use the RELATIVE PATH statement besides URL Address with parameter?

Because using the URL directly with the parameter will cause the Power BI Service to be unable to recognize the source against which it should set credentials and privacy level settings, it will return an error message.

PRODUCTION TIME

RULES THAT HAS TO BE FOLLOWED

- Every API Call has its limitations (calls per Hour, execution time, permissions,...)
- Client secret & Generated Token has its own lifespan and after expiration you have to create a new one!
- Power BI Desktop will allow you to do a little more then your dataset really can in Power BI Service. But Dataflow will save you!
- Dataflows store entities/tables as a type table. If loaded query output is text, number etc... Dataflow natively converts it. To prevent it you have to disable the load of query.
- Data Sources that use Anonymous authentication are automatically given the privacy level Public!!!

Lets build Dataset from functions

Functions [37]

- fx getInfo
- fx getPBIToken
- fx getModifiedWorkspaces
- fx getAppsAsAdminWithoutUsers
- fx getAppUsersAsAdmin
- fx getAppsAsAdminWithUsers
- fx getCapacities
- fx getCapacityUsersAsAdmin
- fx getDatasetUsersAsAdmin
- fx getDatasetsAsAdminWithoutUsers
- fx getDatasetsAsAdminWithUsers
- fx getDatasourcesOfDatasetAsAdmin
- fx getDatasetsAsAdminWithUsers&Datasources
- fx getDatasetRefreshes
- fx getGroupsAsAdmin
- fx getDatasetsInGroupAsAdmin
- fx getDatasetRefreshHistory
- fx getLastDatasetRefreshError
- fx getPipelinesAsAdmin
- fx getDataflowsAsAdmin
- fx getGroupsAsAdminWithUsers
- fx getUserSubscriptionsAsAdmin
- fx getDashboardsAsAdmin
- fx getDashboardTilesAsAdmin
- fx getDashboardsFromWorkspaceWithTilesAsAdmin
- fx getReportsAsAdmin
- fx getReportsInWorkspaceAsAdmin
- fx getReportUsersAsAdmin
- fx getReportSubscriptionsAsAdmin
- fx getGraphToken
- fx getLabels
- fx getDataFromDifferentDataset
- fx getAvailableFeatures
- fx getImports
- fx getDataflowStorageAccounts
- fx getLinksSharedToWholeOrganization
- fx getPublishedToWeb

- Groups
- Pipelines
- Dataflows
- User Subscriptions
- Dashboards
- Dashboards from Selected Workspace
- Reports
- Labels
- DaxQuery
- Available Features
- Imports

What Will will see on refresh in PBIS?

Data source error Information is needed in order to combine data;Information about a data source is required.. The exception was raised by the IDataReader interface. Please review the error message and provider documentation for further information and corrective action. Table: refreshMyDataset.

Cluster URI WABI-WEST-EUROPE-D-PRIMARY-redirect.analysis.windows.net

Activity ID 7887cca8-4840-44ef-899a-56bb1cf77c4d

Request ID 2ea4771b-6203-0f32-62cf-3a4b0f60d622

Time 2022-03-14 12:37:56Z

 Copy

WHY?

Because using the URL directly with the parameter will cause the Power BI Service to be unable to recognize the source against which it should set credentials and privacy level settings so that it will return an error message.
